

AirBnB Insights

By – Akanksha Bhargava &
Anusha Vinod

Agenda

- ❖ Objective
- ❖ Visualization and Inferences
- ❖ Methodology

Objective

- ◆ For the Past few months, AirBnb has seen a major decline in the revenue. Now that the restrictions have started to travel more , AirBnB wants to make sure that it is fully prepared for this Change.
- ◆ So, Analysis has been done on a dataset consisting of various AirBnB listing in New York

Visualization and Inference

72.07% of customers prefer an Entire Home apartment for their stay ,26.84% Private Rooms and 1.09% Shared Rooms. Brooklyn and Manhattan are the top leading neighborhood groups in the rooms listing and most people like the entire home or private room. Williamsburg is high, but the ambience attracts the people

First, we can state that Manhattan has the highest range of prices for the listings with \$150 price as average observation, followed by Brooklyn with \$90 per night. Queens and Staten Island appear to have very similar distributions, Bronx is the cheapest of them all. This distribution and density of prices were completely expected; for example, as it is no secret that Manhattan is one of the most expensive places in the world to live in, where Bronx on other hand appears to have lower standards of living.

Methodology

- ◆ Exploratory Data Analysis: Checked the Null values in the dataset. Found some columns with the null values i.e., names, host_name, last_review, and review_per_month and Checked the outliers in the Dataset.
- ◆ Data Analysis: Try to analyze the data using different columns based on their price, availability, minimum_nights, and the review of the customers we received

Methodology

Inference after analyzing the data:

- ◇ We saw that people like to visit the center of New York from where they can see the beauty of the city.
- ◇ The number of listings of shared rooms is limited but their average price is placed less, and availability is high.
- ◇ Several reviews and reviews per month are more at less price than the higher price as there is less chance of people going for a high price room.
- ◇ Manhattan and Brooklyn are very costly neighborhood groups.
- ◇ People show interest in the host Blue ground and spend more nights here.
- ◇ The minimum number of nights to stay reduces with a price increase.
- ◇ Focus on prime locations like Manhattan and Brooklyn where people show interest.

Thankyou
